EVIDENCE BASED, IMPROVED PATHOGEN RECOVERY, EXPANDED TESTING CAPABILITIES, AND BETTER PATIENT CARE

Patented Liquid Based Collection and Transport System for Microbiology Swab Samples

ESwab™ is a collection and transport system which is FDA cleared for aerobic, anaerobic and fastidious bacteria, maintaining viability for up to 48 hours at room or refrigerator temperature (Neisseria gonorrhoeae survival at 24 hours per CLSI standard).

Improved pathogen recovery for traditional bacteriology culture

Homogeneous sample for more consistent and precise Gram Stains

Swab samples are easily processed on automated specimen processors, and automatic pipettors minimizing manual handling and maximizing investment in automation

Validated for molecular and rapid antigen testing on an increasing number of manufacturers’ platforms*

INNOVATIVE ESWAB™ SYSTEM ELUTES OVER 90% OF PATIENT SPECIMEN into the Liquid Amies transport medium. Multiple investigations can be performed from the same sample:

- Multiple culture plates
- Rapid antigen tests
- Automation
- Gram stains
- Molecular testing

CARE
Fewer samples need to be collected offering a more comfortable experience.

LABORATORY EFFICIENCY
Broad range of testing applications, eliminating costs associated with stocking numerous swab types.

* Always read the manufacturer’s package insert for specific instructions regarding specimen collection and transport for the type of test kit being used.
ESwab™ Collection - Quick Guide

**COLLECT**
- Collect the patient sample using the swab. Avoid touching the swab applicator below the pink molded breakpoint.

**SNAP**
- Remove cap from the tube and insert the swab to the bottom of the tube.
- Holding the tube away from face, grasp the end of swab shaft and bend at a 180 degree angle to break at the pink breakpoint. If needed, gently rotate the swab shaft to complete the breakage.
- Screw the cap on tightly to prevent leakage.

**SEND**
- Identify tube with patient information and send to laboratory.

Specimen collection should be performed by health care personnel who have completed training and demonstrated competency. Always read the manufacturer’s package insert for specific instruction regarding specimen collection and transport for the type of test kit being used.

ESwab™ combines a COPAN invented flocked swab with 1 mL of Liquid Amies in a plastic, screw cap tube. The innovative system elutes over 90% of patient specimen into the liquid medium.
