

Automated Molecular Specimen Setup

**Manage Many
Specimen Types
Simultaneously**

**Fully Automate
Your Molecular
Workflow**

**Automatically
Aliquot to Most
Molecular Assays**

**Process More
Samples with
Fewer Resources**

A Revolution in Molecular Sample Processing

THE UNIVERSE™ AUTOMATES THE MOST LABOR-INTENSIVE ASPECTS OF MOLECULAR SPECIMEN PREPARATION, INCLUDING ACCESSIONING, LABELING, AND ALIQUOTING INTO TUBES AND 96-WELL PLATES. Compatible with most molecular platforms, UniVerse™ manages multiple protocols simultaneously, boosting a laboratory's productivity and streamlining molecular workflows. The system's robotics adjust to a variety of specimen containers. It automatically vortexes, decaps and recaps with no need to remove the swab when present in specimens. UniVerse™ manages capped or uncapped secondary tubes, and 96-well plates. At the touch of a button, UniVerse™ handles high-volume, tedious, and repetitive tasks of molecular specimen preparation. Laboratory professionals can be re-deployed to high-value tasks that require their expertise.

MAXIMIZE LABORATORY EFFICIENCY

Requires minimal intervention for molecular specimen processing, reducing repetitive stress injuries, and freeing staff to perform more complex laboratory tasks.

MAINTAIN COMPLETE TRACEABILITY

The entire sample journey is traced with state-of-the-art specimen barcode management and reporting software that integrates with any LIS system.

CONSISTENT, RELIABLE SPECIMEN SETUP

UniVerse™ allows laboratories to maintain consistent and precise processing, reducing testing variability and human error. The system uses specialized liquid-sensing conductive pipette tips, ensuring accurate specimen uptake and delivery every time.

STREAMLINE MOLECULAR WORKFLOWS

UniVerse™ is compatible with the majority of containers and easily aliquots to most molecular assay tubes and 96-well plates.
